

FOCAL B.A.M. XXXL

XXXL acoustic insulation kit

3 technical materials, 3 strategic functions

This acoustic insulation kit is completing and essential to a quality car audio installation. From its use depends optimum acoustic rendering of speakers, amplifiers and installed accessories. Technical materials made of honeycombed damping material, an Aluminum sheet and a viscoelastic complex (Butyl).

Honeycombed damping material

Just like the acoustic foam inside a loudspeaker, the honeycombed damping material attenuates the speaker back wave and thus increases the speaker performance.

Aluminum sheet

Aluminum provides rigidity to the Butyl/foam couple. This rigidity also permits the easy laying of BAM in difficult locations.

Viscoelastic complex

Self-adhesive, the Butyl complex absorbs the vibrations of the surface with which it's in contact. It highly attenuates the outside noise that gets inside the car.

Key points

- Soundproof your car
- Attenuates the speaker back wave
- Replaces Plain chant
- Observe carefully the laying conditions (min. temperature +15° on a clean surface)
- Content: one 0.5 x 6m sheet (3m²)

Advantages

- Money-saving **extra size**
- Capacity: about 4 doors
- Increases the bass level in your car
- Increases the soundproofing of outside noise
